Subject: Public Comment on the GPU

Hello,

I have been to several of the public meetings regarding the general plan update. I want to give some comment on the Land Use Element.

I support alternative Plan A. It seems that what needs to be our guiding principle in all decisions is sustainable living with the environment. We must commit at this point to making land use decisions that will be in the best interest of the ecosystem we live in. That means to me to make decisions that will maintain current natural lands and guarantee to lessen the impact we humans have on the ecosystem. If we don't support it, it will not support us.

Decisions must be weighed by asking if it supports all life, not just our lives since we are dependent on the ecosystem for our survival. I am not saying this in some new age way. I am saying this is the reality of our lives that we have not been paying attention to and now we must.

Thank you,

Lynn Kerman
